

## Chan Roy Dynamic Team Page Written Plan

- First I will insert all information to the HTML
- Then I will design the Website on the CSS
- Lastly to adding in the “click and show” function by using Javascript

The Assignment requires a “click and show button” function by using Javascript,

First I will add in a “class” tag to the text as “hidden” which will be set as {display: none;} in CSS then I will add in a “show” element in CSS which will be set as {display:block}; in CSS. Then I will first define the button in javascript as the image on the website, then I will add a function telling the computer to toggle the “class’ tag on the html from “hide” to “show”
